

WISCONSIN CRANBERRY BOARD

Website Maintenance Guide

Everything you need to keep wcboard.org up to date

PREPARED

April 10, 2026

WEBSITE

wcboard.org

HOSTED ON

Cloudflare Pages

Welcome

This guide will walk you through everything you need to keep the Wisconsin Cranberry Board website current. The good news: **you do not need to be a developer or have any technical experience.** The website is designed so that anyone can update it using plain English instructions.

How the website works (the short version)

The website's content lives in simple text files stored on GitHub (a service that keeps track of all changes). When those files are updated and saved, Cloudflare Pages automatically rebuilds and publishes the site within a few minutes. You never need to touch a server or write code.

Table of Contents

1. Key Concepts A few terms explained in plain English

2. One-Time Setup Create your accounts and connect everything (do this once)

3. Making Updates with Claude Code The recommended way to make changes, step by step

4. What to Say (Example Requests) Copy-and-paste templates for common updates

5. Annual Update Checklist What changes each year and where

6. Backup Option: Decap CMS A web-based editor for quick text edits

7. Images How to provide photos and logos

8. Google Analytics Setting up traffic tracking

9. Important Information Hosting, domain, contacts, and troubleshooting

1. Key Concepts

Before we get started, here are a few terms you'll see in this guide. You don't need to memorize these — just use this as a reference if you see a word you don't recognize.

Term	What It Means
GitHub	A website (github.com) where the files that make up wcboard.org are stored. Think of it like a shared folder in the cloud, but with a complete history of every change ever made. If something goes wrong, any change can be undone.
Repository (or "repo")	The specific folder on GitHub that contains all the website files. The WCB website repository is at github.com/mossjm/wcboard.org .
Claude Code	An AI tool made by Anthropic that can read, understand, and edit the website files for you. You describe what you want in plain English, and it makes the changes. Think of it like a web developer that works instantly.
Cloudflare Pages	The service that hosts (publishes) the website. Whenever the files on GitHub are updated, Cloudflare automatically rebuilds the live website within a few minutes. You never need to interact with Cloudflare directly.
Commit	A saved set of changes. When Claude Code makes edits to the website, it creates a "commit" — like saving a document, but with a note about what was changed and why.
Push	Sending your saved changes from Claude Code up to GitHub, which triggers the website to rebuild. This is when your changes actually go live.

2. One-Time Setup

You only need to do these steps once. After this, you'll be able to update the website anytime.

Step A: Create a GitHub Account

GitHub is where the website's files are stored. You need an account so Claude Code can access and update those files on your behalf.

- 1 Go to **github.com** in your web browser.
- 2 Click "**Sign up**" in the upper right corner.
- 3 Enter your email address, create a password, and choose a username (e.g., **holly-wcb**).

- 4 Complete the verification steps and confirm your email.
- 5 **Important:** Send your GitHub username to the current site administrator so they can give you access to the website's repository. You'll receive an email invitation to accept.

You need to be invited

Just creating a GitHub account isn't enough — the site administrator needs to add you as a **collaborator** on the website's repository. Once they do, you'll get an email from GitHub asking you to accept the invitation. Click the link in that email to accept.

Step B: Sign Up for Claude

Claude is the AI assistant that will actually make the website changes for you.

- 1 Go to **claude.ai** in your web browser.
- 2 Click "**Sign up**" and create an account using your email.
- 3 Subscribe to the **Pro plan** (\$20/month) or **Max plan** (\$100/month). The Pro plan is sufficient for website maintenance. You can cancel anytime if you only need it for a few months per year.

Step C: Open Claude Code and Connect to the Website

Claude Code is available as a web app — no software installation required.

- 1 Go to **claude.ai/code** in your web browser. This is the Claude Code interface — it looks like a chat window.
- 2 When prompted, **connect your GitHub account**. Claude Code will ask for permission to access your GitHub repositories. Click "Authorize" to allow it. This is how Claude Code reads and edits the website files.
- 3 Select the **wcboard.org** repository from the list of available repositories. If you don't see it, make sure you accepted the collaborator invitation from Step A.
- 4 **That's it!** You're now connected. Claude Code can see all the website files and is ready to make changes.

You're all set!

From now on, whenever you need to update the website, just go to **claude.ai/code**, make sure the **wcboard.org** repository is selected, and start describing what you want to change. You won't need to repeat the setup steps.

3. Making Updates with Claude Code

Now that everything is connected, here's how to actually make a change to the website. This is what you'll do each time you need to update something.

The Process

- 1 Open Claude Code** — Go to **claude.ai/code** in your web browser. Make sure the **wcboard.org** repository is selected.
- 2 Describe what you want changed** in the text box, just like you would in an email. Be as specific as you can. You can type it out, paste from a Word document, or even attach images.
- 3 Claude will make the edits** and show you what it changed. It will ask for your approval before saving. Read through what it did — if something isn't right, just tell it what to fix.
- 4 Tell Claude to commit and push.** When you're happy with the changes, type: *"Commit and push these changes."* This saves the changes and sends them to GitHub.
- 5 Wait a few minutes.** Cloudflare Pages will automatically detect the new changes and rebuild the live website. Your updates will be visible at wcboard.org within 2–5 minutes.
- 6 Check the live site.** Visit wcboard.org in your browser and verify the changes look correct.

Tips for getting the best results

- **Be specific.** "Change the assessment rate on the Grower Resources page from 25 cents to 30 cents" works better than "update the numbers."
- **Paste in text.** You can provide a Word document, a bulleted list, or even a screenshot of what you want changed.
- **Batch your changes.** Claude handles multiple updates at once very well — just like the comprehensive edit request from April 2026.
- **Ask questions.** If you're unsure about something, just ask Claude. It can explain what's on the site and suggest options.
- **Nothing is permanent.** Every change is tracked. If something goes wrong, Claude can undo any change. Don't be afraid to try things.

If something doesn't look right on the live site

Don't panic! Go back to Claude Code and describe what's wrong. For example: *"The board member photo I just added looks stretched. Can you fix it?"* or *"I need to undo the last change I made."* Claude can fix issues or roll back changes easily.

4. What to Say (Example Requests)

Here are ready-to-use templates for the most common updates. Just fill in the details and send to Claude Code:

UPDATE A BOARD MEMBER

"On the About page, remove [Name] from the board of directors and add a new member: [Full Name], [Position], [City], term began September [Year]. Here is their bio: [bio text]. And here is their headshot photo: [attach image]."

UPDATE STATISTICS

"On the home page, update the 'By the Numbers' section: change acres in production to [number], barrels produced to [number], and update the grant funding to \$[amount]. Also update the Programs & Research page to match."

ADD A MEETING

"Add a new board meeting to the Meetings page: [Title], [Date], [Start Time] to [End Time], at [Location], [Address]. Description: [description]."

CHANGE PAGE TEXT

"On the [page name] page, in the [section name] section, change the text from '[old text]' to '[new text]'."

REPLACE AN IMAGE

"Replace the image in the [section name] section on the [page name] page with this photo [attach image]. Use this alt text: '[description of image]'."

5. Annual Update Checklist

Based on the board's schedule, these items typically need updating each year. Use this as a reference when preparing your annual updates.

Page	What to Update	When
Home	By the Numbers (barrels, acres, grant funding) Investment section (total funds, project counts)	After annual funding meeting
About	Board of Directors (new members, updated terms, departures) Annual funding amount (if assessment rate changes)	September (new terms start)
Grower Resources	Assessment rate (if changed) "Where Your Assessment Goes" allocation percentages	As needed
Programs & Research	Grant funding amounts Project and program counts Research areas and partnerships	After annual funding meeting
Meetings	Upcoming meeting dates, locations, agendas	Throughout the year

6. Backup Option: Decap CMS

The website also has **Decap CMS** built in — a web-based content editor that lets you make simple text changes through a visual interface.

How to Access It

- 1 Go to **wcboard.org/admin** in your web browser.
- 2 Log in with your GitHub account.
- 3 You'll see a list of content types you can edit (board members, meetings, page content).
- 4 Click on the item you want to edit, make your changes, and click "Publish."

When to use Decap vs. Claude Code

Use Decap CMS for quick, simple text edits — fixing a typo, updating a phone number, or changing a meeting date.

Use Claude Code for everything else — updating multiple pages at once, swapping images, changing layouts, adding new content sections, or any change where you're not sure which field to edit.

7. Images

When providing new images (headshots, event photos, etc.), here are a few things to keep in mind:

- **Format:** JPG or PNG files work best.
- **Size doesn't matter:** Claude Code will automatically resize and optimize images for the web. Send the highest quality version you have.
- **Headshots:** Portrait orientation works best. The site displays them in circular frames.
- **Page images:** Landscape orientation is preferred for hero images and section photos.
- **Alt text:** For accessibility, every image needs a brief description (e.g., "Portrait of Jane Smith, Board Member"). Claude will add this, but feel free to provide your own.

8. Google Analytics

The website is set up for Google Analytics with a cookie consent banner — visitors are asked for permission before any tracking occurs. To activate analytics:

- 1 Create a Google Analytics 4 property at **analytics.google.com** (or ask your web analytics team to set one up).
- 2 Copy the **Measurement ID** — it starts with "G-" followed by letters and numbers.
- 3 Ask Claude Code: *"Add the Google Analytics tracking ID G-XXXXXXXXXX to the website."* (Replace with your actual ID.)

Once activated, you'll be able to see website traffic data in your Google Analytics dashboard.

9. Important Information

- 

Hosting

The website is hosted on **Cloudflare Pages**. It automatically rebuilds whenever changes are pushed to GitHub. There is no server to manage.
- 

Domain

The domain **wcboard.org** is registered through **Name.com**. Domain renewal and DNS settings are managed there.
- 

Privacy & Cookies

A privacy policy is published at **wcboard.org/privacy**. The cookie consent banner ensures analytics only load after visitor approval. Update the privacy policy if data collection practices change.
- 

Accessibility (ADA)

The website is compliant with WCAG 2.1 Level AA accessibility standards. A full accessibility report is available in the project's **docs/** folder. When making updates, ensure new images have alt text and new content maintains the heading structure.
